It wasn't until the mid 1800's that Bordeaux red wines became more well known from the region. This transformation came with an official decree that classified the top producers of the day. The classification, now deemed "1855 Classification" identified the best producers in the region. The classification hasn't changed (except for one adjustment) even though there are many more producers in the region making outstanding wines.

Because Portugal's wine culture developed in relative isolation, many grape varieties do not grow anywhere else in the world. If you don't recognize the grape variety on a Portuguese wine label, it's a good thing. There are over 250 indigenous varieties and a few imports (including Alicante Bouschet) that have adapted well to the Portuguese landscape (i.e., they are delicious). To many wine experts, Portugal is the last frontier of wine in Western Europe; there is still so much to be tasted and explored.
